

MOJAVE MAGNUM – 2018

Update to Rule Book version 10.11

updated 3/1/18

The following rule is being added to the Mojave Magnum Rule Book version 10.11 issued in January 2018.

- Page 9, add Rule B.1.i: **“Any device affixed to a vehicle by the use of suction cups, either inside or outside the vehicle, must: a) not exceed 1 lb. in weight, and b) be either tethered to the vehicle or have a minimum of 2 strips of 2 inch wide adhesive tape holding down each suction cup. This is to avoid loose items inside of cars and to prevent items from falling onto the runway. Painter’s tape (blue/frog/yellow/masking etc.) is not acceptable for the purposes of this rule.”**

This new rule is effective immediately; however, it will not be included in the Rule Book until a new version is issued, most likely in Fall 2018.

This change may also affect other documents such as the Car and Bike Preparation Guides and the Quick Reference Guide; these will also not be changed until Fall.

Thank you,

The MKM Racing Staff
